

**Environment and Natural Resources Trust Fund
2011-2012 Request for Proposals (RFP)**

Subd: 03h

Project Title: Canada Lynx Recovery Options

Category: H. Other Ideas

Total Project Budget: \$ 50,000

Proposed Project Time Period for the Funding Requested: 2 yrs, July 2011 - June 2013

Other Non-State Funds (secured): \$ 0

Summary:

Canada lynx are a threatened species under ESA in Minnesota. We will develop economically and environmentally sound solutions to restore the Canada lynx population while avoiding costly litigation.

Name: Ron Moen

Sponsoring Organization: U of MN - NRRI

Address: 5013 Miller Trunk Hwy
Duluth MN 55811

Telephone Number: 218-720-4372

Email rmoen@nrri.umn.edu

Web Ad www.d.umn.edu/~rmoen

Location:

Region: NE

Ecological Section: Southern Superior Uplands (212J), Northern Superior Uplands (212L), No. Minnesota and Ontario Peatlands (212M)

County Name: Cook, Koochiching, Lake, St. Louis

City / Township: Duluth

PROJECT TITLE: Helping the Canada lynx population in Minnesota recover

I. PROJECT STATEMENT

Residents and visitors never forget their first sight of iconic northwoods species like moose, wolves, and Canada lynx. There are more than 5,000 moose, about 3,000 wolves, but only 100 to 200 Canada lynx living in Minnesota. Yet from 1930 to 1970 an average 170 Canada lynx per year were harvested in Minnesota. Harvest levels fluctuated up and down with the snowshoe hare cycle and periodic “invasions” of Canada lynx from Ontario. After very low population levels in the 1980s and early 1990s, Canada lynx numbers increased in the 2000s.

An ongoing Canada lynx radiotelemetry study (see map) has led to some unexpected findings. For example, many lynx radiocollared in Minnesota have gone to Ontario and returned. One male has been radiocollared for over 5 years. Findings of the radiotelemetry project that can be used to improve management of Canada lynx in Minnesota include:

1. Conditions are suitable for Canada lynx survival and reproduction in Minnesota
2. Some lynx range across large areas, others settle down for years in a small area
3. Lynx are at the southern edge of their geographic range
4. Lynx make cross-border movements from Minnesota into Ontario
5. Lynx will occasionally “invade” Minnesota during periods of hare scarcity in Canada
6. About 70% of Canada lynx mortality is human caused
7. At least 20% of Canada lynx radiocollared in Minnesota have died in Ontario

The primary goal of this proposal is to use these biological findings to inform management decisions and avoid the protracted litigation process that has been underway for decades on wolf management.

Management must be based on legal considerations because Canada lynx were listed as a Threatened Species under the Endangered Species Act (ESA) in 2000. Over 8,000 mi² of northeastern Minnesota was designated as Critical Habitat for Canada lynx (see map). By law federal agencies (USFS, NPS, DOT, USFWS) must follow provisions in the ESA, the National Forest Management Act (NFMA), and the National Environmental Policy Act (NEPA) when management decisions could impact Canada lynx. The U.S. Fish and Wildlife Service (USFWS) must review any federal-funded project for possible impact.

An analysis by a Cook County business group predicted a negative economic impact of Critical Habitat designation for NE MN. Citizen input to USFWS Critical Habitat meetings indicated concern of a possible economic impact. Yet the USFWS Economic analysis indicated relatively little effect in Minnesota. These types of issues, with contrasting perceptions, can be addressed in the proposed project.

Goals of the project:

Biological findings on Canada lynx living in Minnesota can be applied to speed recovery and ensure persistence of the Canada lynx in Minnesota. Facts and consequences should be considered from a logical perspective rather than an emotional perspective, and this becomes possible with the approach I propose. Many stakeholders have expressed dissatisfaction with the current system, individuals have expressed a desire to consider an alternative solution, and this proposal provides a mechanism to develop alternatives by a biologist who can communicate with stakeholders and agencies. It should be possible to develop solutions that benefit the Canada lynx population in an economically and environmentally sound manner. If this approach does not succeed with the existing baseline support, the alternative is the litigation process that is now occurring with the wolf.

II. DESCRIPTION OF PROJECT ACTIVITIES

Activity 1: Identify conflict issues and develop compromise solutions **Budget:** \$ 50,000

Contacts with regulatory agencies and stakeholders to establish interest are completed. I have letters on file from agencies (US FWS, the Superior National Forest, local government agencies) and stakeholder groups (e.g., forest harvest, trapping, environmental, economic) supporting the effort.

Regulatory agencies (FWS, DNR, SNF) must act within the framework of the ESA and applicable state laws. The language of laws must be interpreted, however, and it is in that context that it is possible to develop solutions. Stakeholders, economic agencies, and developers support decisions in some cases, but there are also frustrations and complaints by some affected individuals. Some frustrations and complaints may be justified; others may be based on misinformation or a lack of understanding.

Minnesota is in a unique position with biological data from radiocollared animals in this state that can guide decisions and recommendations. After developing constraints within which the USFWS must operate to meet legal requirements we will meet individually with stakeholders in the first year of the project. Following synthesis of stakeholder needs and concerns we will identify possible compromise solutions. These solutions will be vetted in small group meetings. Ultimately, we will use a process model similar to what was used recently by the DNR with the Moose Advisory Committee, and has been used previously with the Wolf Roundtable.

Outcome	Completion Date
1. Summary of what is possible from legal framework	9/30/2011
2. Identification of problem areas with stakeholders	6/30/2012
3. Develop and negotiate solutions that acceptable to all parties	6/30/2013

III. PROJECT STRATEGY

A. Project Team/Partners

Ron Moen, University of Minnesota Duluth. Canada lynx radiotelemetry project lead scientist.

Primary agency contacts who have reviewed this proposal, support the concept, and will work with me in its implementation are Tony Sullins, field supervisor, and Tamara Smith, biologist, with the U.S. Fish and Wildlife Service. Richard Baker, Endangered Species Coordinator at the Minnesota Department of Natural Resources, will provide information as requested. The MN DNR has decided not to take a more active role in the initial stages of the project.

B. Timeline Requirements: July 2011 to June 2013.

C. Long-Term Strategy and Future Funding Needs

I have worked on the biological aspects of the lynx project for seven years, and will continue to do so in the future. I will continue developing the economic and sociological applications described in the proposal because I think it is the best approach for Canada lynx and for Minnesota.

Each stakeholder has a vested interest in a positive outcome to the Canada lynx situation in Minnesota, and being a part of the process should lead to both compromises and a sense of ownership in the result.

I do not envision future funding needs for this proposed work from LCCMR but will attempt to acquire the funding that was cut from the original proposal from other sources — if we don't create enough inertia for economic, sociological, and biological compromises to be developed with the funding support requested for this project more dollars from LCCMR will not help.

2011-2013 Detailed Project Budget

IV. TOTAL TRUST FUND REQUEST BUDGET 2 years

<u>BUDGET ITEM</u>	<u>AMOUNT</u>
Personnel:	
PI (Moen) 5% effort; 67% S, 33% FB	\$ 9,108
Undergrad Student 5% AY/20% summer; 91.8% S, 8.2% FB (summer only)	\$ 3,981
Temp Hire 31% effort; 91% S, 9% FB	\$ 28,911
Contracts:	
Other:	
Conference call services	\$ 500
Equipment/Tools/Supplies:	
Lab/field supplies	\$ 1,000
Travel:	
\$56/day per diem x 50 days for 25 overnights = \$2800+vehicle/mileage)	\$ 6,500
Additional Budget Items: N/A	
TOTAL ENVIRONMENT & NATURAL RESOURCES TRUST FUND \$ REQUEST	\$ 50,000

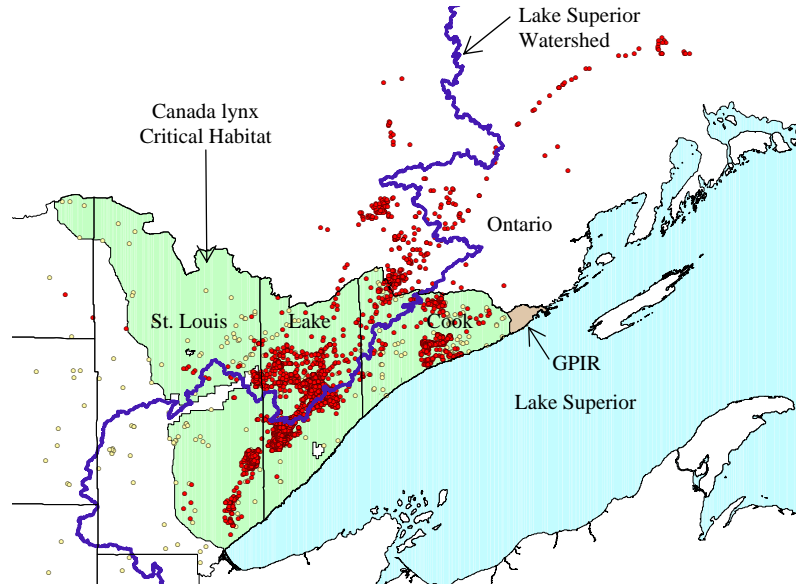

V. OTHER FUNDS

<u>SOURCE OF FUNDS</u>	<u>AMOUNT</u>	<u>Status</u>
Other Non-State \$ Being Applied to Project During Project Period:		
Other State \$ Being Applied to Project During Project Period:		
In-kind Services During Project Period:		
Cooperation/Discussion with US FWS biologist -- Time TBD		
Cooperation/Discussion with MN DNR biologist -- Time TBD		
Remaining \$ from Current ENRTF Appropriation (if applicable):		
Funding History:		
\$ -		
<p>Notes on Match/Other Funds: Federal rules don't allow us to list federal dollar amounts in the columns to right. I have applied for additional funds specifically for this project under CDFA 66-469 - Great Lakes Program FWS-10-ES-GLRI (GLRI 2010, \$120,420). In the federal application even partial funding was requested to initiate this process.</p> <p>About \$800K in federal funds were used in the 7 year Canada lynx radiotelemetry project that made this proposed solution possible.</p>

Helping the Canada Lynx Population in Minnesota Recover

Over 15,000 Lynx locations (dark symbols) between 2003 and 2009 from GPS and VHF radiotelemetry.

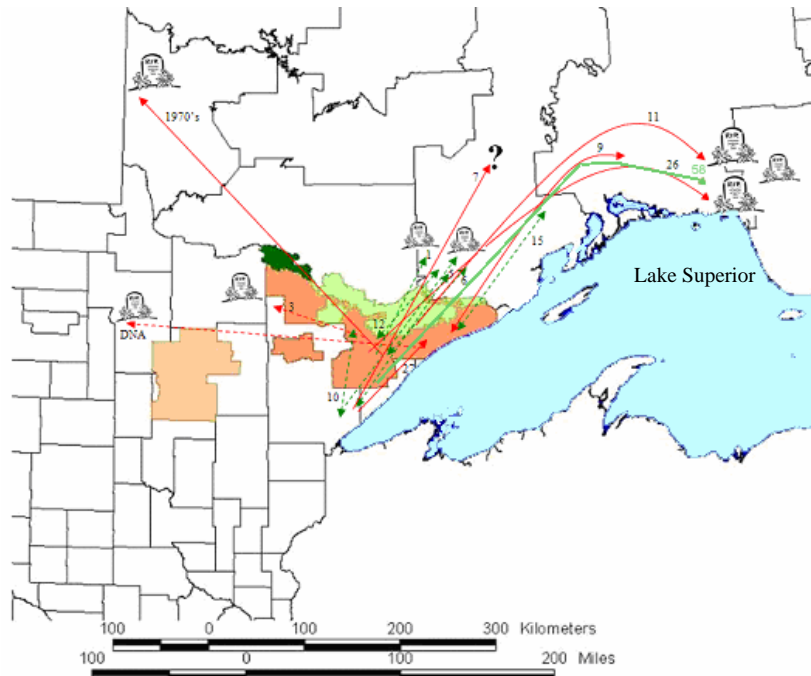

All lynx were collared in Minnesota. Lynx sightings reports (open symbols) are maintained by MN DNR. Some of these reports are verified, others are reported but are not verified.

Canada lynx L07 wearing a GPS radiocollar. L07 was first radiocollared in 2003. She gave birth to two litters of kittens in Minnesota (2004 and 2005). During much of the time she was radiocollared in Minnesota she wore a GPS collar and provided detailed movement and habitat use information.

Movements by radiocollared lynx into Ontario and returns to Minnesota. Movement paths are not exact but illustrate the distance moved by individual animals. Most movements have followed a SW-NE orientation. Movements have been made by both males and females.

Helping the Canada lynx population in Minnesota recover

2011-2012 LCCMR Project Manager Qualifications and Organization Description

Ronald A. Moen, Natural Resources Research Institute, University of Minnesota Duluth

Key Qualifications

Dr. Moen is a research associate at the Natural Resources Research Institute, non-tenure track assistant professor in the Department of Biology at the University of Minnesota Duluth, and holds appointments in the graduate programs of Integrated Biological Science (Duluth campus) and Conservation Biology (Twin Cities campus).

Education

University of Minnesota, Wildlife Conservation, Ph.D. 1995

University of Minnesota, Wildlife, M.S. 1988

Cornell University, Biological Sciences, B.S. 1984

Selected Grants

2010. Legislative-Citizen Commission on Minnesota Resources. R. Moen, M. Lenarz, M. Johnson. Identifying Critical Habitats for Moose in Northeastern Minnesota. \$507,000.

2009. U.S. Fish and Wildlife Service. S. Moore, A. Edwards, and R.A. Moen. Mooz (Moose) Habitat Use in a Changing Climate. \$199,999.

2009. U.S. Geological Survey. S. Windels, M.E. Nelson, R.A. Moen. Investigate Effects of Climate Change and Other Factors on Population Viability of Moose in Voyageurs National Park. \$307,700.

2008. National Park Service. R.A. Moen and S. Moore (Grand Portage Natural Resources and Grand Portage Indian Reservation). Beaver Populations in Grand Portage National Monument and the Grand Portage Indian Reservation \$18,985.

2008. MN DNR. R.A. Moen. Pine Marten and prey in NE Minnesota. \$20,000.

2004-2008. Over \$800,000 in grant funding from federal, state, and private sources for research project on Canada lynx in Minnesota. For full list of funders see www.nrri.umn.edu/lynx.
