

Environment and Natural Resources Trust Fund (ENRTF) M.L. 2013 Work Plan

Date of Status Update Report: October 2, 2012

Date of Next Status Update Report: January 2014

Date of Work Plan Approval:

Project Completion Date: June 30, 2016

Is this an amendment request? No

PROJECT TITLE: Controlling Terrestrial Invasive Plants with Grazing Animals

Project Manager: John Beckwith, Executive Director

Affiliation: Hiawatha Valley Resource Conservation & Development Council

Mailing Address: 3936 E Frontage Road, Suite 114

City/State/Zip Code: Rochester, MN 55901

Telephone Number: 621-599-5864

Email Address: john.e.beckwith@gmail.com

Web Address: Not applicable

Location: Olmsted County plus one other site within the eleven county area including: Rice, Steele, Dodge, Freeborn, Mower, Fillmore, Houston, Winona, Wabasha, Goodhue, Olmsted.

Total ENRTF Project Budget:	ENRTF Appropriation:	\$52,000
	Amount Spent:	\$0
	Balance:	\$52,000

Legal Citation: M.L. 2013, Chp. xx, Sec. xx, Subd. xx <To be inserted following the MN Legislative Session in Spring 2013>

Appropriation Language: <To be inserted following the MN Legislative Session in Spring 2013>

DRAFT

I. PROJECT TITLE: Controlling Terrestrial Invasive Plants with Grazing Animals

II. PROJECT STATEMENT: Terrestrial invasive plants including buckthorn, wild parsnip, garlic mustard and others are becoming dominate species at an alarming rate in many ecological sites in SE Minnesota. Present chemical and mechanical control methods are costly, effective only in the short-term or have other negative environmental impacts. Prescribed grazing for invasive plant management has been used in many parts of the western US to manipulate patterns of defoliation and disturbance to place target plant species at a competitive disadvantage. This is often done by grazing at a time and frequency when target plants are most vulnerable to prevent flower and seed production. Grazing management that employs multispecies (goats, sheep and cattle) grazing techniques takes advantage of each animal’s inherent dietary preferences among different livestock classes. Benefits include reducing the competitive advantage of one plant over another by creating equal pressure on grasses and forbs in a community.

The goal of this project is to: 1) develop a cost effective and environmentally friendly alternative to chemical and mechanical control methods for these species, 2) demonstrate that multispecies grazing techniques can be used effectively to control invasive plants, 3) distribute results during field day demonstrations to connect livestock producers with landowners in the SE Minnesota Driftless Area and 4) develop a Best Management Practice for invasive species control using sustainable grazing management as a component of an overall management plan.

Sites with the target species will be selected and grazed at different durations and intensities using multispecies grazing techniques. The grazing duration, intensity, frequency and timing will be evaluated to determine the most successful method for invasive plant control. Monitoring will be conducted during the spring, summer and fall for three years to document the effect of prescribed grazing management. Control plots will also be established and managed with mechanical or chemical treatments for comparison.

This project will allow Hiawatha Valley RC&D to continue grazing efforts already initiated during the 2011 and 2012 growing seasons to expand federal funds previously earmarked for the Driftless Area Initiative. We envision this project will be the mechanism to transfer small localized prescribed grazing knowledge and sustainable techniques to a broader audience across the SE Minnesota Driftless Area.

III. PROJECT STATUS UPDATES:

Project Status as of July 2014:

Project Status as of January 2015:

Project Status as of July 2015:

Project Status as of January 2016:

IV. PROJECT ACTIVITIES AND OUTCOMES:

ACTIVITY 1: Inventory, Monitoring, Evaluation and Documentation

In this project, at least two sites will be selected with terrestrial invasive species present and herdsman available to graze animals on these sites in an attempt to disrupt the growth of these plants in favor of more desirable species. We will carry out a detailed monitoring plan to include information on vegetative change, general animal health and weight gains, and the related economic implications.

Site conditions will be documented through photographs and vegetation transects at initiation and as the project progresses (spring, summer and fall).

Grazing management techniques will be monitored and evaluated to determine grazing duration, intensity, frequency and timing modifications required to determine the most effective management for target and non-target species.

Animals will be monitored to determine optimal animal and herd size. Producers will be asked to monitor weight of animals at initiation of grazing and at conclusion, amount of supplemental feed provided to animals, any other supplements received, types of veterinary treatments received, and amount of time for caring for herd and moving fences.

Control plots will be established using alternative methods of species control including chemical controls, burning, and physical removal. These plots will be monitored for method comparisons for outreach at field demonstration days.

Summary Budget Information for Activity 1:

ENRTF Budget: \$ 18,000
Amount Spent: \$ 0
Balance: \$ 18,000

Activity Completion Date:

Outcome	Completion Date	Budget
1. Baseline data collection, vegetation transects, and photograph documentation	September 2015	\$3,000
2. Evaluation of grazing modifications (if necessary) for targeted and non-targeted species.	May 2015	\$8,000
3. Inventory, evaluate & document control sites receiving mechanical and chemical treatment	September 2015	\$7,000

Activity Status as of January 2014:

Activity Status as of July 2014:

Activity Status as of January 2015:

Project Status as of July 2015:

Project Status as of January 2016:

Final Report Summary:

ACTIVITY 2: Prescribed Multispecies Grazing of Target Species

Description: At least two sites will be used for this project. One has already been identified (and used in the past) and the other will be identified through an RFP process. Once identified, these sites will be inventoried as to the type of ground cover, presence of invasive species, and other relevant factors as outlined in the previous activity.

Next, livestock producers will be sought to implement prescribed grazing. These producers would need to have the capacity to provide a large enough herd and appropriate animals for the grazing project. Producers would also need to have the capacity to move fences and animals as needed. Finally, any producer chosen for this

project would have to have the ability to measure and provide data on the evaluation points outlined in the previous activity.

The final decision on producers has not yet been made. Currently, a veterinarian with a small goat herd has provided the grazing herd. It may also be possible to use this project as an opportunity to work with young people managing herds or diverse members of the population. A side benefit of this project is to determine whether managing herds to control invasive species is a viable business model.

Once the site and producers are identified, a grazing plan will be developed for each site. In addition to involving the producers and landowners, grazing and other technical experts will also be involved in the development of this plan including Soil and Water Conservation District, NCRS, DNR and others. The plan will identify paddock locations, grazing duration, intensity and frequency during the plants' most vulnerable stage in the reproductive cycle to interrupt flower/seed production. Producers will implement the grazing plan, monitor, and adjust stocking rates as needed. They will also gather the data outlined in Activity 1.

Summary Budget Information for Activity 2:

ENRTF Budget: \$ 24,000
Amount Spent: \$ 0
Balance: \$ 24,000

Activity Completion Date:

Outcome	Completion Date	Budget
1. Select sites with target species & develop site-specific grazing plans (annually)	March 2014	\$8,000
2. Commit to management plans including grazing strategy, paddock enclosures & water sources	September 2015	\$12,000
3. Adjust stocking rates and duration to provide desired control of target species	July 2014	\$4,000

Activity Status as of January 2014:

Project Status as of January 2016:

Final Report Summary:

ACTIVITY 3: Outreach, Education, BMP Development and Reporting

Description: As the grazing implementation progresses, information will be distributed using a variety of methods. At least twice during each year of the grant, field days will be held. The field day will educate the public and land use professional about effective alternative control methods for invasive plant management. Field days will include tours and will request input from participants for BMP development. Additional information will be shared in press releases and articles in appropriate publications. Information will also be shared with other partners (for example site partners Gamehaven Ranch).

Summary Budget Information for Activity 3:

ENRTF Budget: \$ 10,000
Amount Spent: \$ 0
Balance: \$ 10,000

Activity Completion Date:

Outcome	Completion Date	Budget
1. Host 2 field demonstrations per year (6 total)	May 2016	\$6,500
2. Develop multispecies prescribed grazing BMP for invasive plants	March 2016	\$2,000
3. Distribute results and final reporting	June 2016	\$1,500

V. DISSEMINATION:

Description: At least twice during each year of the grant, field days will be held. The field day will educate the public and land use professional about effective alternative control methods for invasive plant management. Field days will include tours and will request input from participants for BMP development. Additional information will be shared through written and on-line media. Media to be included are regional farm publications, local news sources, and through related agency publications such as USDA and Soil and Water Conservation District Newsletters. Finally, information will be shared with other partners (for example, site partners Gamehaven Ranch).

Activity Status as of January 2014:

Activity Status as of July 2014:

Activity Status as of January 2015:

Project Status as of January 2016:

Final Report Summary:

VI. PROJECT BUDGET SUMMARY:

A. ENRTF Budget:

Budget Category	\$ Amount	Explanation
Personnel:	\$ 0	
Professional/Technical/Service Contracts:	\$ 46,000	Herdsmen/Monitoring contractors (0.32 FTE), Inventory and monitoring contractor (0.35 FTE), project manager (0.13 FTE)
Equipment/Tools/Supplies:	\$ 1,000	Chemicals for control plots
Printing:	\$ 4,000	General copying required for detail site plans and evaluations; publication of results as handouts for related tours and meetings; and, publication and printing of the BMP document to be shared with conservation professionals and livestock farmers.
Travel Expenses in MN	\$1,000	Mileage, Lodging, Meals
Other:	\$0	
TOTAL ENRTF BUDGET:	\$ 52,000	

Explanation of Use of Contracted Staff Also Serving as Executive Director: The Hiawatha Valley RC&D is a small nonprofit serving southeast Minnesota. At this time staff assistance is provided through contracted services of an executive director/program manager, a temporary part-time contracted program manager assigned a specific project during the funding period of that project (ending September 30, 2013), and bookkeeping services. The contracted executive director/program manager would be assigned this project due to the three year timeframe associated with the project, and the experience of that individual in working with farmers of southeast Minnesota. Time and expenses of this individual are accounted for in detail, and not comingled with the responsibilities carried out in service as executive director. We do request approval to utilize the contracted executive director/program manager for project management of this proposal.

Explanation of Capital Expenditures Greater Than \$3,500: N/A

Number of Full-time Equivalent (FTE) funded with this ENRTF appropriation: N/A

Number of Full-time Equivalent (FTE) estimated to be funded through contracts with this ENRTF appropriation: 0.80

B. Other Funds:

Source of Funds	\$ Amount Proposed	\$ Amount Spent	Use of Other Funds
Non-state			
In-kind	\$ 24,000	\$	NRCS development and monitoring of Grazing plans
In-kind	\$ 36,000	\$	Grazing land (value of rental)
State			
TOTAL OTHER FUNDS:	\$ 52,000	\$	

VII. PROJECT STRATEGY:

A. Project Partners:	John Zinn	NCRS-USDA	\$0
	George Poch	Private Soil Scientist	\$0
	Mike Muzzy	NRCS-USDA	\$0
	Kurt Hinz	Minnesota DNR	\$0

B. Project Impact and Long-term Strategy:

Terrestrial invasive plants including buckthorn, wild parsnip, garlic mustard and others are becoming dominate species at an alarming rate in many ecological sites in SE Minnesota. Present chemical and mechanical control methods are costly, effective only in the short-term or have other negative environmental impacts. Establishing a BMP using grazing for wider spread use to control invasive species has potential in several areas: minimizing use of physical or chemical interventions, cost effectiveness, introduction of a business model for managing herds for invasive species management, and of course, controls of invasive plants and return to native species.

This project builds on grazing efforts already initiated by Hiawatha Valley RC&D during the 2011 and 2012 growing seasons and expands on federal funds previously earmarked for the Driftless Area Initiative. We envision this project will be the mechanism to transfer small localized prescribed grazing knowledge and sustainable techniques to a broader audience across the SE Minnesota Driftless Area.

C. Spending History:

Funding Source	M.L. 2007 or FY08	M.L. 2008 or FY09	M.L. 2009 or FY10	M.L. 2010 or FY11	M.L. 2011 or FY12-13
USDA-NRCS Conservation Technical Assistance Program-Driftless Area Initiative					\$16,500

VIII. ACQUISITION/RESTORATION LIST: N/A

IX. MAP(S): N/A

X. RESEARCH ADDENDUM: N/A

XI. REPORTING REQUIREMENTS:

Periodic work plan status update reports will be submitted not later than January 2014, July 2014, January 2015, July 2015, and January 2016. A final report and associated products will be submitted between June 30 and August 1, 2016 as requested by the LCCMR.
