PROJECT TITLE: Accelerating perennial crop production to prevent nitrate leaching

Project Manager: Dennis Fuchs Organization: Stearns County Soil and Water Conservation District College/Department/Division: Mailing Address: 110 Second Street S. Suite 128 City/State/Zip Code: Waite Park, MN 56387 Telephone Number: 320-345-6477 Email Address: Dennis.Fuchs@mn.nacdnet.net Web Address:

Location: Pope County, Stearns County

Total Project Budget: \$440,000 Amount Spent: \$0 Balance: \$440,000

Legal Citation: M.L. 2019, First Special Session, Chp. 4, Art. 2, Sec. 2, Subd. 04k

Appropriation Language: \$440,000 the first year is from the trust fund to the commissioner of natural resources for an agreement with the Stearns County Soil and Water Conservation District to reduce nitrate leaching on sandy soils of central Minnesota by developing water-efficient production methods, supply chains, and end-use markets for three perennial crops: Kernza, prairie species, and alfalfa. Net income from the sale of products or assets developed or acquired through this project may be reinvested as described in the work plan approved by the Legislative-Citizen Commission on Minnesota Resources according to Minnesota Statutes, section 116P.10.

I. PROJECT STATEMENT:

The sandy soil cropland in Central Minnesota is prone to nitrate leaching; an environmental concern that degrades groundwater and poses human health risks for communities relying on groundwater for drinking water. Nutrient laded water flows quickly through these sandy soils. As a result, farmers need to irrigate crops, which further exacerbates nitrate leaching. Perennial plants are more effective at accessing nitrogen and water deep in the soil where annuals cannot, which means that perennial crops can be particularly effective at reducing nitrate leaching in sandy soils.

Our objective is to 1) measure nitrate leaching and 2) identify and develop commercialization opportunities for seed, forage, and grain from three perennial crops grown on sandy soil:

- Native prairie because it's known to provide ecosystem services and retain nitrogen on sandy soil but requires value chain research to improve the economics of seed production (for prairie restorations).
- Intermediate wheatgrass (Kernza) because it's a deep rooted perennial grain that has potential to be profitable if supply chain work is conducted to align growers and end-users.
- Alfalfa because it's Minnesota's most common perennial crop but has limited nitrate retention benefits because it fixes nitrogen.

Native prairie and Kernza provide valuable seed, and all three perennials also provide biomass as a nonfood co-product that can enhance profitability from sales as forage, straw, or biofuel. **This project will compare total net revenues from seed and biomass within each perennial cropping system with and without irrigation to determine economic viability on sandy soil while reducing nitrate leaching.**

The expansion of perennial crops in Central Minnesota is possible only if a market for their seed and biomass exists. Furthermore, identifying markets for their co-products will accelerate the adoption of these nitrogenconserving crops. Currently, demand for Kernza exceeds supply because of supply chain challenges related to grain cleaning, processing, storage, and transportation. Minnesota's agricultural communities likely possess the technology and innovation to overcome the Kernza supply chain challenges, and this project will identify those assets and facilitate the supply chain resources necessary for rural Minnesota to capitalize on this unique economic opportunity. **This project will also conduct supply-chain research to identify markets for Kernza grain, native prairie seed, and perennial crop biomass.** This project will empower a unique team to study and implement Kernza so that it can reduce groundwater nitrate pollution and stimulate rural economies.

II. OVERALL PROJECT STATUS UPDATES:

First Update March 1, 2020

Second Update September 1, 2020

Third Update March 1, 2021

Final Report between project end (June 30) and August 15, 2021

III. PROJECT ACTIVITIES AND OUTCOMES:

ACTIVITY 1 Title: Quantify and compare nitrate leaching and yields of prairie, alfalfa, and Kernza grown with and without irrigation on sandy soils of Central Minnesota.

Description: We will test the hypothesis that Kernza and native prairie seed production are more effective at reducing nitrate leaching than alfalfa on sandy soils of Central Minnesota under irrigated and rain-fed conditions by measuring soil water nitrate content using lysimeters. We will test the hypothesis that Kernza and native prairie seed and biomass yields will result in equal profitability with and without irrigation by measuring seed/grain and biomass yield annually. Economic assessments will be conducted using results from value chain research in Activity 3. This research will be conducted at the Rosholt Research Farm, a public research facility

owned and operated by the Pope Soil Water Conservation District and within the Bonanza Valley Groundwater Management Area.

ACTIVITY 1 ENRTF BUDGET: \$251,608

Outcome	Completion Date
1. A report comparing soil water nitrate beneath Kernza, native prairie, and alfalfa managed with and without irrigation	June 30, 2021
2. A report comparing grain, seed, and biomass yield from Kernza, prairie, and alfalfa growth with and without irrigation	June 30, 2021

First Update March 1, 2020

Second Update September 1, 2020

Third Update March 1, 2021

Final Report between project end (June 30) and August 15, 2021

ACTIVITY 2 Title: Kernza demonstration field in a Drinking Water Source Management Area

Description: Establish two Kernza demonstration fields totaling 36 acres on privately owned, row-crop agricultural fields within the City of Cold Spring Drinking Water Source Management Area in Stearns County. These fields will be monitored for nitrate leaching and demonstrate field scale production. They will be the sites of two field days and outreach events. Grain from these fields will be used for supply chain research described in Activity 3.

ACTIVITY 2 ENRTF BUDGET: \$23,112

Outcome	Completion Date
1. Establish 36 acres of Kernza on two farms in Drinking Water Source Management Areas	June 30, 2021
2. Produce 12,000 pounds of Kernza grain for testing processing techniques and research	June 30, 2021
3. Demonstrate nitrate leaching reductions beneath Kernza fields	June 30, 2021
4. Host two field days and education events at the Kernza demonstration fields	June 30, 2021

First Update March 1, 2020

Second Update September 1, 2020

Third Update March 1, 2021

Final Report between project end (June 30) and August 15, 2021

ACTIVITY 3 Title: Develop value chains for food and non-food applications of Kernza and native prairie seed and biomass

Description: For food applications, examine Kernza as a food ingredient (bread, cereal, pasta, beer, etc.) with MN companies and map local processor capabilities, opportunities and barriers. Characterize and provide technical information on handling (clean and de-hull), storage, formulation and shelf life of selected Kernza product development concepts. Supply nutritional profiles for food/beverage containing Kernza and conduct sensory analysis. For non-food applications, characterize Kernza and native prairie straw for feed value and identify potential markets; evaluate straw as pelleted fuel or biomass blend for heating and as composite for

plastic/fiberglass/pressed wood applications and identify the companies that process the fiber. Examine the use of straw for poultry litter.

ACTIVITY 3 ENRTF BUDGET: \$165,280

Outcome	Completion Date
1. Value chain summary report on Central MN value chains utilizing Kernza grain, native	June 30, 2021
prairie seed, and co-products (straw, chaff) in food/beverage and non-food applications	
2. Summarize limitations of Kernza and native prairie co-products and propose possible	June 30, 2021
solutions (e.g. blending with other fibers to enhance properties of end products)	

First Update March 1, 2020

Second Update September 1, 2020

Third Update March 1, 2021

Final Report between project end (June 30) and August 15, 2021

IV. DISSEMINATION:

Description: Research results will be summarized and presented in the LCCMR final report document. In additions, research results from the Activity 1 will be published in a peer-reviewed manuscript, presented at the Minnesota Water Resources Conference, and summarized in a two-page handout designed for a broad range of audiences including farmers, policy-makers, business leaders, and others. This handout will be made available to attendees of a Kernza water quality field day that will be held in 2020 and 2021. Information from activity 3 will be disseminated at the field days, as well as in a value-chain summary report. This report will be made available online on multiple high-visitation websites.

The Minnesota Environment and Natural Resources Trust Fund (ENRTF) will be acknowledged through use of the trust fund logo or attribution language on project print and electronic media, publications, signage, and other communications per the <u>ENRTF Acknowledgement Guidelines</u>.

First Update March 1, 2020

Second Update September 1, 2020

Third Update March 1, 2021

Final Report between project end (June 30) and August 15, 2021

		District	

B. Partners outside of project manager's organization NOT receiving ENRTF funding

Name	Title	Affiliation	Role
Margaret Wagner	Supervisor, Clean Water	Minnesota Department	Advise on project
	Technical Assitance Unit	of Agriculture (MDA)	outcomes and
			deliverables
Mark Wettlaufer	Planning Supervisor	Minnesota Department	Advise on project
		of Health (MDH)	objectives and
			deliverables, review
			reports
Aaron Meyer	Source Water Specialists	Minnesota Rural Water	Advise on project
		Association (MRWA)	objectives and
			deliverables, review
			reports and outreach
			materials

VII. LONG-TERM- IMPLEMENTATION AND FUNDING:

The long-term strategy is to develop perennial crops with high economic value and environmental benefits including improved groundwater quality. This project complements the 2018 LCCMR project 057-B related to Kernza production in wellhead protection areas, which has been recommended for funding at 33% of the original project budget. This proposed project is unique in that it compares water quality benefits among other perennial crops, and that the research tests the effects of irrigation. Another differentiating feature that this project includes the supply chain aspects of marketing perennial crop seed, grain and biomass. This project will further expand the application portfolio for Kernza and perennial crops.

VIII. REPORTING REQUIREMENTS:

Project status update reports will be submitted March 1 and September 1 each year of the project

• A final report and associated products will be submitted between June 30 and August 15, 2021

IX. SEE ADDITIONAL WORK PLAN COMPONENTS:
