

Environment and Natural Resources Trust Fund

M.L. 2021 Approved Work Plan

General Information

ID Number: 2021-376

Staff Lead: Rory Anderson

Date this document submitted to LCCMR: July 29, 2021

Project Title: St. James Pit Water Level Control Study

Project Budget: \$259,000

Project Manager Information

Name: Stefanie Dickinson

Organization: City of Aurora

Office Telephone: (218) 229-2614

Email: cityclerk@ci.aurora.mn.us

Web Address: <http://www.aurora-mn.com/>

Project Reporting

Date Work Plan Approved by LCCMR: July 28, 2021

Reporting Schedule: December 1 / June 1 of each year.

Project Completion: December 31, 2023

Final Report Due Date: February 14, 2024

Legal Information

Legal Citation: M.L. 2021, First Special Session, Chp. 6, Art. 6, Sec. 2, Subd. 04h

Appropriation Language: \$259,000 the first year is from the trust fund to the commissioner of natural resources for an agreement with the city of Aurora to install sampling wells and conduct a study to determine appropriate mitigation of the abandoned St. James pit mine to protect surface and drinking water and prevent harm to homes and residents.

Appropriation End Date: June 30, 2024

Narrative

Project Summary: The St. James Pit Rising Water Levels Study, Mitigation, and Diversion Plan

Describe the opportunity or problem your proposal seeks to address. Include any relevant background information.

The St. James Pit is an old, abandoned Iron Ore Mine within the City of Aurora. It is not subject to new mining mitigation rules due to its operation many years ago before rules were in place. The City receives its drinking water from this mine and has a pumping station near it. The City, along with neighboring communities, have decided to switch to another source of water, and therefore Aurora will stop pumping water from the St. James Pit. The water level will rise-- estimated to rise 33 feet. The consequences may be water discharge via a surface outlet that needs to be developed, the St. James pit walls will destabilize, aquifer water levels will rise promoting basement flooding, and unintended surface water discharges will occur. The proposal seeks to develop a plan to address these problems using scientific data and analysis.

What is your proposed solution to the problem or opportunity discussed above? i.e. What are you seeking funding to do? You will be asked to expand on this in Activities and Milestones.

It is proposed that 14 well installations be developed that will allow the collection of groundwater elevation data, which will be used to determine groundwater flow directions, hydraulic gradients, aquifer parameters, and other data to be used in modeling. The modeling will determine the potential outflow rates at different water elevations to aid in engineering and design of the potential outlet. The data collected from the wells, pit water levels data, and precipitation data would go into the modeling effort. An important component of the project will be the Pit Wall Stability study to assess the mechanisms and safety factors associated with the ability of natural and human altered earthen materials to address pit wall stability throughout the potential range of pit water levels. The Wet Basement Study is to determine the potential for wet basements in the City to occur depending on the water elevations in the pit. This will be done by using the well information to determine current water levels in the surgical sediments and collecting information from homeowners . These studies will determine the outflow management plan in the future.

What are the specific project outcomes as they relate to the public purpose of protection, conservation, preservation, and enhancement of the state's natural resources?

These efforts will protect, preserve, conserve and enhance the water quality of the St. James Pit, the aquifer, and the discharge into the local river as well as fish populations who enjoy these waters. It is targeted especially to these waters and the pit that was substantially impaired. This effort will provide strategies that include citizens and the community in these scientific efforts. It is specifically designed to mitigate the impacts resulting from artificial hydrological modifications and its effects on the drinking water of the community. The outflow work will prevent and reduce the levels of potential contaminants in surface waters.

Project Location

What is the best scale for describing where your work will take place?

Region(s): NE

What is the best scale to describe the area impacted by your work?

Region(s): NE

When will the work impact occur?

During the Project and In the Future

Activities and Milestones

Activity 1: Pit Wall Stability and Wet Basement Studies

Activity Budget: \$45,800

Activity Description:

The pit wall stability study will access the mechanisms and safety factors associated with the ability of natural and human altered earthen materials (glacial drift and assorted fill associated with past mining operations) to address pit wall stability throughout the potential range of pit water levels. Identify the possible mechanisms of uncontrolled outflow from each of the target locations. Determine the factors of safety for a range of water elevations at a number of locations identified for modeling that pose the greatest threat to public safety. The wet basement study will determine the potential for wet basements to occur depending on water elevations in the pit. By using the well information to determine current water levels in the surficial sediments and collecting information from homeowners basement elevations.

Activity Milestones:

Description	Completion Date
Pit Wall Stability & Wet Basement Study 25% complete.	November 30, 2021
Pit Wall Stability & Wet Basement Study 50% complete.	March 31, 2022
Pit Wall Stability & Wet Basement Study 75% complete.	July 31, 2022
Wet Basement Study Completed	December 31, 2022
Pit Wall Stability Study Completed	December 31, 2022

Activity 2: Well Installation And Monitoring

Activity Budget: \$213,200

Activity Description:

This activity consists of installing 4 bedrock wells and 10 surficial wells to collect groundwater elevation data in the City of Aurora. The data will be used to determine groundwater flow directions, hydraulic gradients and aquifer parameters used in modeling and needed studies. The purpose of the modeling is to determine the potential outflow rates at different water elevations to aid the engineering design of the potential outlet. The data collected from all of the wells, pit water levels data, precipitation data, etc. would be integrated into the modeling effort.

Activity Milestones:

Description	Completion Date
Well Installation & Water Modeling 25% complete.	November 30, 2021
Well Installation & Water Modeling 50% complete.	March 31, 2022
Well Installation & Water Modeling 75% complete.	July 31, 2022
Water Modeling Completed	December 31, 2022
Well Installation Completed	December 31, 2022

Project Partners and Collaborators

Name	Organization	Role	Receiving Funds
Doug Gregor	East Range Joint Powers Board	Coordinates the joint efforts of the surrounding communities to identify and implement an alternative community water supply and support the studies.	No
Hydrological Services Firm	Firm To Be Selected On A Qualifications Process	Responsible for the completion of the well installation, modeling, pit wall stabilization study and wet basement study	Yes
Chris Ismil	Department of Iron Range Resources and Rehabilitation	Project co-funder	No
Michael Liljegren	Division of Lands and Minerals, Minnesota Department of Natural Resources	Michael Liljegren, the Supervisor of Mine Permitting and Coordination Section, will coordinate the project with the City Clerk and supervise the modeling, well installation, Pit Wall stability Study, and Wet Basement Study.	No

Dissemination

Describe your plans for dissemination, presentation, documentation, or sharing of data, results, samples, physical collections, and other products and how they will follow ENRTF Acknowledgement Requirements and Guidelines.

All study results will be shared with the East Range Joint Powers Board, Department of Iron Range Resources, Minnesota Department of Natural Resources and other stakeholders.

The City has regular project meetings. Documentation of these meetings are developed in the form of meeting minutes that are presented and approved by the City Council. All council meetings are public and reports discussed are available to the general public.

The Minnesota Environment and Natural Resources Trust Fund (ENRTF) will be acknowledged through use of the trust fund logo or attribution language on project print and electronic media, publications, signage, and other communications per the ENRTF Acknowledgement Guidelines.

Long-Term Implementation and Funding

Describe how the results will be implemented and how any ongoing effort will be funded. If not already addressed as part of the project, how will findings, results, and products developed be implemented after project completion? If additional work is needed, how will this be funded?

The results will determine the outflow discharge and the need for pit wall stabilization to prevent harm to the community and adjacent waters and aquifer. The City and the DNR will report the findings to the Minnesota Legislature and seek funding from the State and other sources including Section 569 program of the Army Corps of Engineers for the implementation of the long-term plan to control the water levels. Project results will also be reported to our collaborating partners and the community.

Other ENRTF Appropriations Awarded in the Last Six Years

Name	Appropriation	Amount Awarded
County Geologic Atlases - Part B, Mapping Aquifer Hydrology	M.L. 2019, First Special Session, Chp. 4, Art. 2, Sec. 2, Subd. 03o	\$2,400,000

Difference between Proposal and Work Plan

Describe changes from Proposal to Work Plan Stage

We have made the change to the title. Thank you!

Additional Acknowledgements and Conditions:

The following are acknowledgements and conditions beyond those already included in the above workplan:

Do you understand and acknowledge the ENRTF repayment requirements if the use of capital equipment changes?

N/A

Do you agree travel expenses must follow the "Commissioner's Plan" promulgated by the Commissioner of Management of Budget or, for University of Minnesota projects, the University of Minnesota plan?

N/A

Does your project have potential for royalties, copyrights, patents, or sale of products and assets?

No

Do you understand and acknowledge IP and revenue-return and sharing requirements in 116P.10?

N/A

Do you wish to request reinvestment of any revenues into your project instead of returning revenue to the ENRTF?

N/A

Does your project include original, hypothesis-driven research?

Yes

Does the organization have a fiscal agent for this project?

No
